

Travel Consulting ERD

The company has 12 teams, each named after an animal. Each team serves exactly one current region, while a region might have zero or more teams. Only current team-region assignments are stored; reassignment history is not tracked. Each team has at least one consultant, while each consultant belongs to at least one team. Each call is handled by exactly one consultant, while a single consultant may have zero or more calls. Call types are “New Travel Needs” and “Existing Reservation.” Call duration is measured in seconds. Daily counts by call type and duration statistics are calculated from the call logs.

DVD Rental ERD

Each employee works in exactly one current branch. A job transfer will change the branchNumber, but the history of job transfers will not be stored.

Each branch has exactly one manager. The managerStaffNumber field is mandatory and unique. The manager must be an employee of the same branch.

A movie may have been recorded before it is offered in any branch. Each branch offers at least one movie, and each branch_movie record contains at least one dvd copy.

All copies of the same movie within the same branch share a daily rental cost, which is stored in the branch_movie table.

Each member is registered in one or more branches. A branch can have no registered members. The registrationDate field records the time when the member joined the branch.

In the dvd table, (branchNumber, imdbCode) is a composite foreign key that references the branch_movie table. In the rental table, (branchNumber, memberNumber) is a composite foreign key that references the branch_member table.

A rental must be made in a branch where the member has registered. The DVD must also belong to that branch. rental.branchNumber must match dvd.branchNumber.

Each rental record correlates to a DVD. A DVD can have multiple borrowed records, but there can be at most one outstanding borrowing record at a single time. The dateReturned field is empty before the DVD is returned and cannot be earlier than dateOut.

The limit of 10 DVDs indicates that each member can have a maximum of 10 outstanding borrowing records in all branches. rental.dailyRentalCost stores the daily rental price when the DVD is rented out. Later price changes will not affect this record.

The member's full name and the movie title can be retrieved from the related tables, so they are not repeated in rental.
